

Week 1 — Repo Scaffold (bash script)

Copy this whole block into your terminal. It will create the repo, folders, base pages, styles, and commit.

```
#!/usr/bin/env bash
set -euo pipefail

# Usage: ./scaffold.sh my-site (or run as-is to use default name)
PROJECT=${1:-brand-site}

# Create folders
mkdir -p "$PROJECT"/{pages,src/components,styles,public}
cd "$PROJECT"

# Brand Site – Week 1 Scaffold

This repo was generated to satisfy Week 1 DoD:
- Style guide + tokens
- Base pages (Home/About/Contact)
- Repo initialized & committed

## Run locally
Open `pages/index.html` in your browser (double-click or drag into a tab).
Optional: start a local server (Python 3):

```bash
python3 -m http.server -d pages 5173
then visit http://localhost:5173
```

## Structure

```
/pages # Static pages
/styles # Global CSS tokens + utilities
/src # Components (if you add JS later)
/public # Static assets (images, icons)
```

## Git init & first commit

```
git init >/dev/null 2>&1 || true git add . git commit -m "Week 1 scaffold: repo, base pages, styles, README"
>/dev/null 2>&1 || true
```

```
echo "\n✅ Done. Open pages/index.html to view the site." echo " Optional: python3 -m http.server -d pages
5173 # then http://localhost:5173" ``
```

**What you get** - `pages/index.html`, `pages/about.html`, `pages/contact.html` using your brand tokens. - `styles/style.css` with the exact color roles, fonts, spacing, and components from `style.md`. - `README.md`, `.gitignore`, and an initial Git commit.

If you want a React/Tailwind variant (Vite + Tailwind + shadcn/ui) I can generate a separate scaffold script next.
